

Project Spotlight: Old Mission United Methodist Church Window Replacement Fairway, KS

Contractor: Chicago Lumber Commercial Services

Project Overview:

As part of Old Mission's 75th Anniversary Celebration held in September of 2017, the Board of Trustees solicited window proposals to replace the sanctuary and steeple windows one year earlier. The intent was to match the existing single pane wood windows, with operable, energy efficient, low maintenance units. Chicago Lumber Commercial Services proposed Marvin clad-wood windows with a factory applied exterior clad casing to match the original historic windows.

Special Considerations:

The 6' wide x 17' tall round top windows presented several challenges, from design to installation. Because of the wide exterior casing profile and the need to bend the aluminum, the clad casing was made up of 3 different profiles, and joined together during assembly. The church office building on one side of the sanctuary also limited equipment access, making installation difficult.

The time frame for design, manufacturing, and installation was critical on this project. New dies for the custom profile casing needed to be made, and the windows needed to be installed before the Anniversary Celebration. Marvin was able to meet the lead time needed, and installation finished ahead of schedule.

Scott Long, Chair of the Board of Trustees:

"I am very pleased with how it turned out and I think the windows look spectacular. We were very impressed with the installation and the work was very detail oriented. The installation crew did a great job."
